                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The invention comprises a method of determining etiology of an autistic epectrum disorder in a patient. The method involves determining the level of an infectious agent, toxic chemical, or dietary protein derived antigen, or their antibodies in samples of patient, and comparing antigens/antibodies levels with normal levels of antigens/antibodies from control subjects. The method of the invention is useful for determining the etiology of an autistic spectrum disorder, such as autism, pervasive development disorder and haperger's syndrome. The present amino acid sequence represents a peptide that was used in the exemplification of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    ö

                                                                                                                                                                                              The present sequence represents glycine-extended gastrin-17. Treatment of glycine-extended gastrin-17 (G17-G1y)-dependent gastrontestinal tumours comprises administering an anti-gastrin 17 (anti-G17) immunogenic composition. Anti-G17 immunogens raise antibodies which bind both the amidated and glycine-extended forms of G17. Neutralisation of progastrin G17-G1y prohormone by the antibodies inhibits the growth of tumour cells dependent on progastrin G17-G1y as growth stimulator or inducer. The method is especially for the treatment of colorectal adenocarcinomas in humans. This novel method is non-invasive, selectively reversible, does not does not cross the blood brain barrier

for delivery of a water-soluble substance e.g. immunomimic peptides. (1) comprises several liposomal vesicles comprising a high weight ratio of a lipid to an encapsulated water-soluble substance so as to achieve a high efficiency of encapsulation. The immunomimic peptide is chosen from gastrin G-17 (ADH89206 to ADH89213 and ADH89223), gastrin G-14 (ADH89217-ADH89219), gonadotropin releasing hormone (GRRH) peptide (ADH89220 and ADH89222 and ADH89220. (1) comprising vaccines directed against hormone or hormone cognate receptors, where the vaccine comprises at least one: hormone-immunomimic peptide such as gastrin G-17 or G-14 is useful for hormone-immunomimic peptide such as gastrin G-17 or G-14 is useful for hormone-immunomimic peptide such as gastrin G-17 or G-14 is useful for hormone-immunomimic peptide such as gastrin G-17 or G-14 is useful for hormone-immunomimic peptide such as gastrin G-17 or G-14 is useful for hormone-immunomimic peptide such as gastrin G-17 or G-14 is useful for hormone-immunomimic peptide such as gastrin G-17 or G-14 is useful for hormone-immunomimic peptide such as gastrin G-17 or G-14 is useful for
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             treating gastrointeefinal malignancy, and non-gastrointestinal tumors such as thyroid and lung cancer; or GnRH or hCG immunomimic peptide is useful as contraceptive and for treating cancers in male and female
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   present invention relates to injectable liposomal compositions (I)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Gaps
                                                                                                                                                                                                                                                         substance e.g. vaccine for preventing pregnancy, comprises several liposomal vesicles comprising a high weight ratio of lipid to encapsulated water-soluble substance.
                                                                                                                                                                                                                          Injectable liposomal composition for delivery of a water-soluble
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Length 18;

The invention relates to determining the total amount of gastrin or free gastrin hormone in a biological fluid sample. The method involves (a) obtaining a biological fluid sample comprising a gastrin hormone from a patient; (b) providing an immobilized antibody that selectively binds a creminal epitope of the gastrin hormone; (c) incubating the sample in the presence of an N-terminal sequence gastrin peptide under conditions for binding of the gastrin hormone in the sample to the antibody in hormone in the sample to the gastrin hormone conflued, and N-terminal sequence gastrin peptide, and incubating the complex with a detectable marker conjugated antibody that selectively binds an N-terminal epitope of gastrin hormone to form an immobilized detectable marker-conjugated antibody complex, and incubating with a detectable marker-conjugated antibody complex, and incubating with a detectable marker-conjugated antibody complex, and incubating with a cetectable marker-conjugated antibody complex, and incubating with a cetectable marker-conjugated antibody complex, and incubating with a cetectable marker-conjugated antibody complex, and incubating with a smonoclonal antibody and/or the N-terminal selective antibody and the N-terminal selective antibody and the N-terminal selective antibody and the N-terminal selective antibody bind G17-G19, and the N-terminal selective antibody belong the processed form of gastrin found as a minor component of little interminal interminal selective antibody and interminal selective antibody selecting and/or quantifying free or total amount of G19, and the N-terminal selective antibody selecting and or gastrin found sequence of G17-G19, and the N-terminal selective antibody selecting and or gastrin found sequence of G17-G19
                 Determining total or free amount of gastrin hormone in a biological fluid sample comprises incubating the sample in the presence of an N-terminal sequence gastrin peptide for binding to a C-terminal specific antibody.

The present invention relates to an affinity-binding assay for selecting antigen specific immune cells. The method involves contacting particle such as a cell having four copies of target molecule with two binding molecules specific for the target molecule, where first of the binding molecules is associated with a first label and a second of the binding molecules is associated with a second label, detecting cells staining with each label and selecting cells binding both labels. The invention also provides a method for detection of early B cell populations in antibody. The present sequence is a gastrin peptide. This sequence is an immunogenic peptide used as a vaccine.
                                                                                                              Affinity-binding assay for selecting antigen specific immune cells, by contacting cell having four copies of target molecule with two labeled binding molecules, detecting cells staining with each label, selecting cells binding both labels.

The invention relates to determining the total amount of gastrin or free gastrin hormone in a biological fluid sample. The method involves (a) obtaining a biological fluid sample comprising a gastrin hormone from a patient; (b) providing an immobilized antibody that selectively binds a creminal epitope of the gastrin hormone; (c) incubating the sample in the patient of an N-terminal sequence gastrin peptide under conditions for binding of the gastrin hormone in the sample to the antibody to broxnone; (d) washing the immobilized complex to remove unbound antibody complex of the mathody bound to the gastrin hormone in the sample to remove unbound antibody and N-terminal sequence gastrin peptide, and incubating the complex with a detectable marker-conjugated antibody that selectively binds an N-terminal epitope of gastrin hormone to form an immobilized detectable carter-conjugated antibody complex, and incubating with a detectable marker-conjugated antibody complex, and incubating with a captectable marker-conjugated antibody complex, and incubating with a detectable marker-conjugated antibody complex, and incubating with a capterial amount of (free) gastrin hormone in the biological fluid captellogument reagent; and (f) measuring the developed reagent to determine to determine selective antibody and the N-terminal selective antibody and the N-terminal selective antibody and the N-terminal selective antibody bind G17. The method is antibody and the N-terminal selective antibody bind G17. The method is useful for detecting and/or quantifying free or total amount of gastric hormone peptides including antibody-bound, in a biological fluid. The present sequence represents the amino acid sequence of gastrin 34 (G34), complex of the predominant form of big gastrins in human.
               Determining total or free amount of gastrin hormone in a biological fluid sample comprises incubating the sample in the presence of an N-terminal sequence gastrin peptide for binding to a C-terminal specific antibody.

The invention relates to determining the total amount of gastrin or free gastrin hormone in a biological fluid sample. The method involves (a) obtaining a biological fluid sample comprising a gastrin hormone from a patient; (b) providing an immobilized antibody that selectively binds a creminal epitope of the gastrin hormone; (c) incubating the sample in the presence of an N-terminal sequence gastrin peptide under conditions for binding of the gastrin hormone in the sample to the ample in conditions for binding of the gastrin hormone in the sample to the gastrin hormone in the sample to the gastrin hormone; (d) washing the immobilized complex to remove unbound antibody cand N-terminal sequence gastrin peptide, and incubating the complex with a detectable marker conjugated antibody that selectively binds an N-terminal epitope of gastrin hormone to form an immobilized detectable marker-conjugated antibody complex, (e) washing the immobilized detectable marker-conjugated antibody complex, and incubating with a detectable marker-conjugated antibody complex, and incubating with a creectable marker-conjugated antibody complex, and incubating with a detectable marker-conjugated antibody complex, and incubating with a creectable marker-conjugated antibody complex, (e) washing the immobilized confluence of gastrin hormone in the biological fluid sample. The C-terminal selective antibody and the N-terminal selective antibody bind G17 (G17-G19) and the C-terminal selective antibody bind G17 or glycine extended G17 (G17-G19) and the C-terminal selective antibody bind G17. The method is useful for detecting and/or quantifying free or total amount of gastric hormone peptides including antibody-bound, in a biological fluid represents sequence represents the amino acid sequence of glycine-extended GC gastrin 34 (G14-G1y).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ö
                                                                           Determining total or free amount of gastrin hormone in a biological fluid sample comprises incubating the sample in the presence of an N-terminal sequence gastrin peptide for binding to a C-terminal specific antibody.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Gaps

                                                                                                                   ઠે
                                                                                                              Synthetic immunogenic peptides are provided in which a universal immune stimulator is linked to a peptide or protein hapten containing B cell and/or cytotoxic T Umphocyte epitopes, giving a product which causes potent immune responses to the coupled peptide or protein. The stimulator consists of (A) a promiscuous helper T cell epitope (Th) which elicits an immune response to the coupled peptide in members of a heterogeneous population expressing diverse HLA phenotypes, and (B) an adjuvant peptide sequence from the invasin protein of Yersinia. Spacer amino acid sequence from the inmune stimulator and hapten components. When the hapten is LHRH, then optionally the invasin domain can be omitted from the immune stimulator and hapten component. The present sequence is an example of a gastrin hapten which can be bound to the immune stimulator to form a vaccine for treating peptic ulcer fisease or gastrin-stimulated tumours. (Updated on 25-MAR-2003 to correct PN field.)

The invention relates to a pharmaceutical composition comprising a keratinocyte growth factor (KGF) agonist and a gastrin compound that provides beneficial effects relative to each compound alone, and optionally a carrier, excipient, or vehicle. The composition provides custained beneficial effects, and is in a form that provides normal blood glucose levels in a subject that persist for a prolonged period of time after administration. The composition further comprises amounts of a KGF agonist and a gastrin compound in a form for chronic or acute therapy of a subject in need, where the amounts are suboptimal relative to the amount of each compound administered alone for treatment of disbetes. The beneficial effects are reduced or absent islet inflammation, decreased the disease or condition, and/or are substained beneficial effects that the persist for a prolonged period of time after termination of treatment.
                                                                                                                                                                                                                                                                                                                                                                                                    ö
cancer. The method involves inhibiting gastrin expression in colon cancer cells using antisense construct. The present sequence is a human amidated gastrin peptide. Gastrin is a peptide hormone that plays a role in the initiation of colon tumours
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              New pharmaceutical composition comprising a keratinocyte growth factor (KGF) agonist and a gastrin compound, useful in treating or preventing diabetes, hypertension, heart failure and obesity.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             KGF; FGF; keratinocyte growth factor; gastrin-17; antilipaemic; antidiabetic; vasotropic; cerebroprotective; cardiant; antiarrhythmic; antidacterial; immunosuppressive; antilnflammatory; gastrointestinal; antiulcer; hypotensive; noctropic; neuroprotective; anorectic; dermatological; endocrine; respiratory; hepatotropic; gene therapy; cell therapy; fibroblast growth factor.

The composition is useful for the preparation of a medicament for the treatment of a condition or disease, such as dyslipidaemia, hyperglycaemia, severa hypoglycaemic episodes, stroke, left ventricular hyperglycaemia, severa hypoglycaemia, septicaemia, irritable bowel syndrome, tunctional dyspepsia, diabetes, catabolic changes after surgery, stress induced hyperglycaemia, septicaemis, mycardial infarction, impaired glucose tolerance, hypertension, Alzheimer's disease and other central and peripheral neurodegenerative conditions, chronic heart failure, fluid retentive states, metabolic syndrome and related diseases, and disorders and obesity. The composition is also used to promote and/or enhance soft tissue growth and regeneration, such as in epidermolysis bullosa, chemotherapy induced alopecia, male-pattern baldness, hyaline membrane disease and hepatic cirrhosis. The present sequence represents a little gastrin (gastrin-17) peptide sequence.
                                                                                                                                                                                                                                                                                                                                                                                                  Gape
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Novel glutaminyl cyclase (QC) inhibitor-related human peptide #13.

```
The invention relates to a novel pharmaceutical composition comprising a gastrin compound having an extended activity, upon administration to a subject, in comparison with native gastrin. The compounds of the invention may be useful for treating a subject having diabetes. This involves measuring a physiological indicator of isle neogenesis and fasting blood glucose (FBG). The method further involves decreasing insulin dependency. Furthermore, the compounds may be useful for maintaining an increase in gastrin serum level for an extended period of time. The current sequence is that of the human gastrin-17 mutant peptide of the invention which may act as a stimulator of the gastrin or CCK
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Pharmaceutical composition for treating subject with diabetes, has gastrin compound having extended activity upon administration to subject in comparison with native gastrin.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             intestine. The present invention and water section. In the Stondard and intestine. The present invention and water section.

EC-2.3.2.5) is capable of catalyzing the cyclisation of Gln and Glu to proglutamate (pGlu), making the enzyme a target for drug development.

CC Gastrin 17 has Gln as its N-terminal residue, making it a substrate for Gastrin 17 has Gln as its N-terminal residue, ascreening and use of effectors of QC for the preparation of a medicament for: (a) the cc fissasse that can be treated by modulation of QC activity in vivo, and/Ori (b) the modulation of physiological processes based on the action of pGlu-containing peptides caused by modulation of QC activity. The QC effectors are used to alter the conversion of N-terminal Glu or Gln residues to pGlu residues in a QC substrate such as gastrin 17. They can be used to treat Alzheimer's disease, Down Syndrome, Muntington's disease, Kennedy's disease, ulcer disease and gastric cancer with or without Helicobacter pylori infections, pathogenic psychotic conditions, achieved the conditions and achieved the conditions, achieved the conditions, achieved the conditions and call-mediated immune responses, achieved the conditions and cell-mediated immune responses.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            leukocyte adhesion and migration processes in the endothelium, impaired food intake, sleep-wakefulness, impaired homeostatic regulation of energy metabolism, impaired tentonomic function, impaired hormonal balance and impaired regulation of body fluids. The effectors of QC are also useful for: regulating and/or controlling male fertility; stimulating gastrointestinal tract cell proliferation, preferably proliferation of gastric mucosal cells, epithelial cells, acute acid secretion and for differentiating acid-producing parietal cells acute acid secretion and for enterochromaffin-like cells (all claimed).
                                                                                                                                                                                                                                                                                                                                                        The present sequence is that of gastrin 17, a peptide that stimulates the stomach mucosa to produce and secrete HCl and the pancreas to secrete dispertive enzymes. Gastrin 17 also stimulates smooth muscle contraction and increases blood circulation and water secretion in the stomach and
                                                                                                                                                                                                                                      treating diseases and/or

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      322582825
                                                                                                                                                                                                                                                                                                                                                                                                 The invention relates to a pharmaceutical composition (1) comprising a gastrin compound (C1) having an extended activity upon administration to a subject in comparison with native gastrin. (1) or C1 is useful for reating a subject having diabetes, which involves administrating C1 or a modified gastrin capable of covalently reacting with a serum protein, where the frequency of administration for antive gastrin. The method further involves measuring a physiological indicator of islet neogenesis, measuring astrin comprises a sequence of native gastrin capable of binding to the gastrin comprises a sequence of native gastrin capable of binding to the gastrin CCK receptor and an amino terminal cysteine or lysine. (1) or C1 is useful for maintaining for an extended period of time an increased gastrin serum level compared with the serum level of a peptide having an amino acid sequence of a native gastrin, which involves daministering C1. (1) Contains gastrin compositions having longer active curculation in a subject. This sequence corresponds to the variant gastrin-lifers from sequence denoted as SEQ ID NO: 4 as given in the Sequence differs from sequence denoted as SEQ ID NO: 4 as given in the Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       ö
                                                                                                                                                                                                                                                                                                                               Pharmaceutical composition useful for treating diabetes, comprises a gastrin compound having an extended activity upon administration to a subject in comparison with native gastrin.

The invention relates to the use of a glutaminyl cyclase effector (E1) CC for modulating conversion of glutamic acid/glutamine residue to CC for modulating conversion of glutamic acid/glutamine residue to CC gyrcollutemic acid residue at the N-terminus of a glutaminyl cyclase (QC) condition mediated by modulation of QC enzyme activity e.g. Familial condition bementia (FDD) and Familial Danish Dementia (FDD), ulcer disease and duodenal cancer with or with our Helicobacter pylori infections, colorectal cancer, with or with out Helicobacter pylori infections, colorectal cancer, with or with out Helicobacter pylori infections, colorectal cancer, without Helicobacter pylori infections, colorectal cancer, millammatory host responses, cancer, malign metastasis, psoriasis, inflammatory host responses, cancer, malign comparation processes in the emdothelium, impaired food intake, sleep contaction processes in the emdothelium, impaired food intake, sleep contaction impaired homeostatic regulation of energy metabolism, impaired unconomic function, impaired hormonal balance and impaired condicaments for males. The amino acid sequence of an N-terminal glutamine condicaments for males. The amino acid sequence of an N-terminal glutamine condicaments for males. The amino acid sequence of an N-terminal glutamine condicaments for males.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       ö

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The invention relates to imidazole derivatives and their salts, stereolsomers and polymorphs. The invention also relates to a composition occuprising an imidazole optionally in combination with a carrier and/or excipient. The inidazole derivatives are useful in the manufacture of a medicament for the treatment of neurological diseases especially a medicament for the treatment of neurological diseases especially chorea, psychotic disorders, spiritomen, impaired food intake, sleep disorders, impaired homeostatic regulation of energy metabolism, bypertension, fever, anorexia nervosa, anxiety disorders, depression, epilepsy, drug dependence, alcoholism and neurodegenerative diseases including cognitive disorders and dementia. The imidazole derivatives are also useful for stimulating the proliferation of myelod progenitor cells or to suppress male fertility. This sequence represents a glutaminyl cyclase inhibitor peptide used in the scope of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    ö

The present sequence represents glygastrin, a processing intermediate of gastrin derived through post-translational modification of the gastrin comparison developed of inhibiting the growth of gastrin-axpressing colon cancer cells. The method comprises reducing gastrin expression of the cells by transfecting the cells to induce attisence polynucleotides inhibiting gastrin expression in the cells. A composition has also been developed for treating colon cancer, which comprises an expression construct comprising a promoter functional in comprises an expression construct comprising a promoter functional in continuate to and under the control of the promoter. The composition is used for treating colorectal cancer, especially in humans. Antibodies against gastrin are non-specific and cross-react with cholecystokinin. Also, antibodies are not available against all precursor forms of gastrin, and may often be antigenic themselves. The present method provides an alternative that can be used for the treatment and

The present sequence represents gastrin, a processing intermediate of gastrin derived through post-translational modification of the gastrin comparison of the gastrin acceptance of gastrin-expressing colon cancer cells. The method comprises reducing gastrin expression of the cells by transfecting the cells to induce antisense polynuclectides inhibiting gastrin expression in the cells. A composition has also been developed for treating colon cancer, which comprises an expression construct comprising a promoter functional in cukaryotic cells and a polynuclectide encoding a gastrin gene positioned antisense to and under the control of the promoter. The composition is used for treating colorectal cancer, especially in humans. Antibodies against gastrin are non-specific and cross-react with cholecystokinin. Also, antibodies are not available against all precursor forms of gastrin, and may often be antisense the treatment and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             ö

The invention relates to a conjugate comprising a ligand, a linker and a cytotoxic agent. Also provided is a method of delivering a cytotoxic agent in a cell-specific manner, that involves administering the conjugate to a collection of cells comprising a receptor to which the ligand of the conjugate binds; where the cytotoxic agent is administered to the cells is a cell-specific manner. A composition comprising the conjugate and a carrier and the methods are useful in delivering drugs especific cell populations, such as cancer cells, and in treating cancer through the release of the cytotoxic agent. The present sequence comprises of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Harvesting a desired polypeptide produced by a recombinant host cell, for

                                                                                                                                                                                                                                                                                                                                                                                            The present invention relates to methods for the treatment of colon cancer. The method involves inhibiting gastrin expression in colon cancer cells using antisense construct. The present sequence is a human progastrin derived peptide. Gastrin is a peptide hormone that plays a role in the initiation of colon tumours

                                                                                                                                                                                                                                           ö
                                                        The invention relates to a novel method for harvesting a (poly) peptide produced by a recombinant host cell. The novel method involves selecting a call comprising a first nucleic acid encoding a leader peptide and a second nucleic acid fragment encoding the desired (poly) peptide. The first and second fragments are within the same open reading frame of the first nucleic acid and the leader peptide is functionally equivalent to an N-terminal leader peptide found with the pre-peptide of a lantibiotic. The host cells and nucleic acids are useful for producing, harvesting and post-translational modification of polypeptides. The polypeptides may be used in the production of pharmaceuticals, e.g. as antigen for vaccine or immunogenic composition. This sequence represents a polypeptide relating to the novel method of the invention.
producing pharmaceuticals, comprises selecting a recombinant nucleic acid
comprising nucleic acid fragments encoding a leader peptide and the

The invention relates to a pharmaceutical composition (I) comprising a comparison with native gastrin. (I) or (I is useful for a subject in comparison with native gastrin. (I) or (I is useful for treating a subject having diabetes, which involves administering C1 or a modified gastrin capable of covalently reacting with a serum protein, where the frequency of administering the gastrin compound is less than comparison of a native gastrin. The method further involves measuring a physiological indicator of islet neogenesis.

C involves measuring a physiological indicator of islet neogenesis, measuring fastrin comprises a sequence of native gastrin capable of binding to the gastrin/CCK receptor and an amino terminal cysteine or binding to the gastrin/CCK receptor and an amino terminal cysteine or cystene. (I) or (I is useful for maintaining for an extended period of time an increased gastrin serum level compared with the serum level of administering C1. (I) Contains gastrin compositions having longer active circulation in a subject. This sequence of a native gastrin, which involves circulation than native gastrin peptides, and has a longer half-life in circulation in a subject. This sequence corresponds to amino acids 2-34 corresponded to wild type gastrin-34 peptide used in the invention. (Note: this sequence differs from sequence denoted as SEQ ID NO: 1 given on page 4 of the disclosure of the specification).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Helper T cell epitope, universal immune stimulator, invasin; hapten; gastrin; peptic ulcers; gastrin-stimulated tumours.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Immunogenic luteinising hormone releasing hormone peptide(s) - that suppress LHRH activity in males and females.

Symmetric randominations are provided in which a mineral information of symmetric is a linked to a peptide or protein hapten containing B cell and/or cytotoxic T lymphocyte epitopes, giving a product which causes potent immune response to the coupled peptide or protein. The stimulator consists of (A) a promiscuous helper T cell epitope (Th) which elicits an immune response to the coupled peptide in members of a heterogeneous population expressing diverse His henotypes, and (B) an adjuvant peptide sequence from the invasin protein of Yersinia. Spacer amino acid sequences (e.g. Gly-Gly) can be provided between the invasin and Th domains and between the immune stimulator and hapten components. When the hapten is LHRH, then optionally the invasin domain can be omitted from the immune stimulator component. The present sequence is an example of a spacer in the immune stimulator component to the immune stimulator to form a vaccine for treating peptic ulcer disease or gastrin-stimulated tumours. (Updated on 25-MAR-2003 to correct PN field.)
Synthetic immunogenic peptides are provided in which a universal immune

벙 Inhibition of growth of colon cancer cells - by transfection anti:sense gastrin gene sequences.

Disclosure; Page 51; 62pp; English

The present sequence represents an amidated gastrin, a processing intermediate of gastrin derived through post-translational modification of the gastrin gene (see AAT97414). A method has been developed of inhibiting the growth of gastrin-expressing colon cancer cells. The method comprises reducing gastrin expression of the cells by transfecting the cells to induce antisense polynucleotides inhibiting gastrin expression in the cells. A composition has also been developed for treating colon cancer, which composition has also been developed for treating colon cancer, which composition cells and a polynucleotide encoding a gastrin gene positioned antisense to and under the control of the promoter. The composition is used for treating colorectal cancer,

The present invention describes a modified therapeutic peptide (I)

comprising a therapeutically active amino acid region (III) and a

casctive group (II) (e.g. succinimidyl and maleimido groups) attached to

a less therapeutically active amino acid region (IV), which covalently

bonds with amino/hydroxyl/thiol groups on blood components to form a

comprision of the real lised therapeutic peptide components to form a

peptidase stabilised therapeutic peptides of 3-50 amino acids.

(I) are useful for modifying therapeutic peptides e.g. hormones, growth

contour treatment of various disorders. Endogenous therapeutic

peptides are not suitable as drug candidates as they require frequent

comprision of the treatment of various disorders. Endogenous therapeutic

peptides are not suitable as drug candidates as they require frequent

administration due to rapid degradation by peptidases in the body.

Modifying and attaching therapeutic peptides to albumin prevents or

reduces the action of peptidases to increase length of activity (half

IIE) and specificity as bonding to large molecules decreases

intracellular uptake and interference with physiological processes.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Modifying and attaching therapeutic peptides to albumin prevents peptidase degradation, useful for increasing length of in vivo activity.
especially in humans. Antibodies against gastrin are non-specific and cross-react with cholecystokinin. Also, antibodies are not available against all precursor forms of gastrin, and may often be antigenic themselves. The present method provides an alternative that can be used for the treatment and prophylaxis of colon-cancer cell growth
                                                                                                                                                                                                 Gapa

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Sequence 3, Application US/09076372

Patent No. 6548066

GENERAL INFORMATION:
GENERAL INFORMATION:
APPLICANT: Michaeli, Dov
APPLICANT: Watson, Susan A.
APPLICANT: Watson, Immunogenic Compositions
ITILE OF INVENTION: Immunogenic Compositions
ITILE OF INVENTION: to the CCK-B/Gastrin Receptor and
ITILE OF INVENTION: the Treatment of Tumors
NUMBER OF SEQUENCES: 3
CORRESPONDENCE ADDRESS:
ADDRESSE: Dimitrios T. Drivas, White & Case LLP
STREET: New York
CITY: New York
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            COUNTRY:

ZIP: 1036-2787

COMPUTER READABLE FORM:

MEDIUM TYPE: Floppy disk

COMPUTER: IBM PC compatible

OPERATING SYSTEM: PC-DOS/MS-DOS

SOFTWARE: PatentIn Release #1.0, Version #1.30

CURRENT APPLICATION DATA:

APPLICATION NUMBER: US/09/076,372

FILING DATE: 12-MAY-1998

CLASSIFICATION: 424

PRIOR APPLICATION DATA:

APPLICATION NUMBER: 60/046,201

FILING DATE: 12-MAY-1997

ATTORNEY/AGENT INFORMATION:

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Sequence 6, Application US/08188223
; Sequence 6, Application US/08188223
; Patent No. 5688506
; GENERAL INFORMATION:
    APPLICANT: Grimes, Stephen
    TITLE OF INVENTION: Immunogens Against Gonadotropin
    TITLE OF INVENTION: Inmunogens Against Gonadotropin
    NUMBER OF SEQUENCES:
    ADDRESSER: Dimitrios T. Drivas, Esq.
    STATE: NY
    STATE: NY
    COUNTRY: USA
    COUNTRY: USA
STREET: 112.

STATE: New York
STATE: 100036
COUNTRY: U.S.A.
ZIP: 100036
COMPUTER: 100036
COMPUTER: IBM PC compatible
OPERATING SYSTEM: PC-DOS/MS-DOS
SOFTWARE: PATENTIN Release #1.0, Version #1.25
CURRENT APPLICATION DATA:
APPLICATION NUMBER: PCT/US94/13205
FILING DATE: 12-NOV-1993
CLASSIFICATION:
ATTORNEY/AGENT INPORMATION:
NAME: DITUAR, DIMILITION:
REGISTRATION NUMBER: 32,218
REGISTRATION NUMBER: 1102865-028
TELEPHONE: (212) 394-813
TELEPHONE: (212) 394-813
INFORMATION POR SEC ID NO: 1:
SEQUENCE CHARACTERISTICS:
LENGTH: 16 amino acids
TYPE: amino acids
TYPE: amino acids
TYPE: peptide
TOPOLOGY: linear
TELMICATION: NO

Patent No. 6703491
GENERAL INFORMATION:
APPLICANT: Homburger et al.
APPLICANT: Homburger et al.
TITLE OF INVENTION: Nucleic acids and proteins of Drosophila melanogaster
FILE REFERENCE: File Reference: 7326-094
CURRENT FILING DATE: 1999-03-17
NUMBER OF SEQ ID NOS: 62517
SOFTWARE: PatentIn Ver. 2.0
SEQ ID NO 51037
LENGTH: 160
                                                                                                                                                                                                                                                                                                                                                                                                                   Sequence 35820, Application US/09270767

) GENERAL INFORMATION:

) APPLICANT: Marc J. Rubenfield et al.

) TITLE OF INVENTION: NUCLBIC ACID AND AMINO ACID SEQUENCES RELATING TO PSEUDOMONAS

) TITLE OF INVENTION: AERUGINOSA FOR DIAGNOSTICS AND THERAPEUTICS

) FILE REPERENCE: 107196.136
                                                                                                                         Sequence 506, Application US/09949002

Patent No. 6900016

GENERAL INFORMATION:

APPLICANT: VENTER, J. Craig et al.

TITLE OF INVENTION: POLYMORPHISMS IN KNOWN GENES ASSOCIATED

TITLE OF INVENTION: WITH INFLAMMATORY AUTOIMMUNE DISEASE, METHODS OF DETECTION

TITLE OF INVENTION: WID USES THEREOF

FILE REFRENCE: CLO00790

CURRENT FILING DATE: 2000-01-28

PRIOR APPLICATION NUMBER: 60/231,401

PRIOR PELING DATE: 2000-0-08

NUMBER OF SEQ ID NOS: 10823

SOFTWARE: PastSEQ for Windows Version 4.0

SEQ ID NO 506
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ö

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Sequence 31687, Application US/09270767

Patent No. 6703491
GENERAL INFORMATION
APPLICANT: Homburger et al.
TITLE OF INVENTION: Nucleic acids and proteins of Drosophila melanogaster FILE REFERENCE: File Reference: 7326-094
CURRENT APPLICATION NUMBER: US/09/270,767
CURRENT PILING DATE: 1999-03-17
NUMBER OF SEQ ID NOS: 62517
SOFTWARE: PatentIn Ver. 2.0
SEQ ID NO 31687
LENGTH: 112
                                                                                                                                                       Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Gapa

Sequence 4, Application US/08151219
; Patent No. 5468494
; GENERAL INFORMATION;
APPLICANT: Gevae, Philip C.
APPLICANT: Grae, Stephen
APPLICANT: Michaeli, Dov
APPLICANT: Michaeli, Bobert
TITLE OF INVENTION: IMPROVED IMMUNOGENIC COMPOSITIONS
TITLE OF INVENTION: AGAINST HUMAN GASTRIN 17
NUMBER OF SEQUENCES:
CORRESPONDENCE ADDRESS:
ADDRESSEE: Dimitrios T. Drivas, White and Case
STREET: 1155 Avenue of the Americas
                                                                                                                                                                                                                                                                                                                                                                                                                                                              STATE: 1125 AVENUE OI THE AMERICAS
CITY: New YORK
COUNTRY: U.S.A.
ZIP: 100036
COMPUTER READABLE FORM:
MEDIUM TYPE: RIOPY disk
COMPUTER: 1BM PC compatible
OPERATING SYSTEM: PC-DOS/MS-DOS
SOFTWARE: PREANTIN Release #1.0, Version #1.25
CURRENT APPLICATION DATE:
APPLICATION NUMBER: US/08/151,219
FILING DATE: 12-NOV-1993
CLASSIFICATION NUMBER: 32,218
REGISTRATION NUMBER: 32,218
REGISTRATION NUMBER: 32,218
REPRENCE/POCKET NUMBER: 31,218
TELEPHONE: (212) 354-8113
INFORMATION FOR SEQ ID NO: 4:
SEQUENCE CHARACTERISTICS:
LENGTH: 15 amino acids
TYPE: amino acids

PRIOR APPLICATION DATA:
APPLICATION NUMBER: 08/602,999
FILING DATE: 16 FEB-1996
ATTORNEY/AGENT INFORMATION:
NAME: Misrock, S. Leslie
REGISTRATION NUMBER: 18,872
REFERENCE/DOCKET NUMBER: 1101-202
REFERENCE/DOCKET NUMBER: 1101-202
TELEPHONE: (212) 790-9090
TELEPAX: (212) 869-9741/8864
TELERAX: (6141 PENNIE
INFORMATION FOR SEQ ID NO: 433:
SEQUENCE CHARACTERISTICS:
LENGTH: 15 aming acids
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ; Sequence 5, Application US/09413564C; Patent No. 6716428

                                                                                                                                              ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              US-09-413-564C-41

SGQUENCE 41, Application US/09413564C

Patent No. 671642B

GENERAL INPORMATION:
FERNELL INPORMATION:
TITLE OF INVENTION: APPLICANT: The Ohlo State University Research Foundation
TITLE OF INVENTION: Antigenic modification of polypeptides
FILE REPREBNCE: UNF 2-056 AVI
CURRENT PILICATION NUMBER: US/09/413,564C

FRIOR PILICATION NUMBER: 09/413,564

PRIOR PILICATION NUMBER: 09/413,564

PRIOR PILICATION NUMBER: 09/413,564

PRIOR PILICATION NUMBER: 09/413,564

PRIOR PILICATION NOWER: 09/413,564

PRIOR PILICATION NOWER: 09/413,564

PRIOR PILICATION OF: 43

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Sequence 75, Application US/08488351A

Sequence 75, Application US/08488351A

Patent No. 5843446

GENERAL INFORMATION:
APPLICANT: Ladd, Anna
APPLICANT: Zamb, Timothy
TITLE OF INVEXTION: Immunogenic LHRH peptide constructs
TITLE OF INVEXTION: and synthetic universal immune stimulators for vaccines
NUMBER OF SEQUENCES: 114
CORRESPONDENCE ADDRESS:
ADDRESSEE: Maria C.H. Lin
STREET: 345 Park Avenue
CITY: New York
SATATE: NY
                                                                                                                                                                                                                                                                                                                                             ö
                                                                                                                                                                                                                                                                                                                                                Gарв

Sequence 74. Application US/08488351A

Facent No. 5843446

GENERAL INFORMATION:
APPLICANT: Ladd, Anna
APPLICANT: Zamb, Timochy
TITLE OF INVENTION: Immunogenic LHRH peptide constructs
TITLE OF INVENTION: and synthetic universal immune stimulators for vaccines
NUMBER OF SEGUENCES: 114

CORRESPONDENCE ADDRESS:
ADDRESSEE: Maria C.H. Lin

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Sequence 100, Application US/08446692
Patent No. 575951
GENERAL INFORMATION:
APPLICANT: Ladd, Anna
APPLICANT: Zamb, Timothy
TITLE OF INVENTION: Immunogenic LHRH peptide constructs
TITLE OF INVENTION: and synthetic universal immune stimulators for vaccines NUMBER OF SEQUENCES: 114
CORRESPONDENCE ADDRESS:
ADDRESSEE: Maria C.H. Lin
STREET: 345 Park Avenue
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           ö

Patent No. 6165990

GENERAL INFORMATION:

APPLICANT: Singh, Pomila

APPLICANT: Singh, Pomila

APPLICANT: Wood, T.

TITLE OF INVENTION: EXPRESSION FOR TREATMENT OF COLORECTAL CANCER

NUMBER OF SEQUENCES: 17

CORRESPONDENCE ADDRESS:

ADDRESSEE: Arnold, White & Durkee

STREET: P.O. Box 4433

CITY: Houston

STATE: Texas

CONTEXT: United States of America

ZIP: 77210

COMPUTE: READABLE FORM:
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Gaps

Sequence 2. Application US/09174263
; Sequence 2. Application US/09174263
; Patent NO. 6319898
; GENERAL INFORMATION:
; APPLICANT: Davies, J.
; APPLICANT: Baxens, G.
; TITLE OF INVENTION: METHOD FOR INHIBITING EUKARYOTIC PROTEIN KINASES
; TITLE REPERENCE: 9993-007
; CURRENT APPLICATION NUMBER: US/09/174,263
; CURRENT FILING DATE: 1998-10-16
; NUMBER OF SEQ ID NOS: 3
; SOFURAN FILING DATE: 1998-10-16
; NUMBER PASESEQ for Windows Version 3.0
; SEQ ID NO 2
; LENGTH: 17
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Sequence 76, Application US/08446692
; Sequence 76, Application US/08446692
; Patent No. 575951
; GENERAL INFORMATION:
    APPLICANT: Ladd, Anna
    APPLICANT: Ladd, Anna
    APPLICANT: Zamb, Timothy
    TITLE OF INVENTION: Immunogenic LHRH peptide constructs
    TITLE OF INVENTION: and synthetic universal immune stimulato
    NUMBER OF SEQUENCES: 114
    CORRESPONDENCE ADDRESS:

Sequence 7, Application US/08416478A

Patent No. 5773578

GENERAL INFORMATION:
APPLICANT: Hercend, Thierry
APPLICANT: Triebel, Frederic
TITLE OF INVENTION: New Proteins Produced By Human
TITLE OF INVENTION: Unmphocytes, DNA Sequences Encoding These Proteins And
TITLE OF INVENTION: Their Pharmaceutical And Biological Uses
TITLE OF SEQUENCES: 10
CORRESPONDENCE ADDRESS: 10
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            US-09-270-42702

US-09-270-42702

Sequence 42702, Application US/09270767

Patent No. 6703491

GENERAL INFORMATION:

APPLICANT: Homburger et al.

TITLE OF INVENTION: Nucleic acids and proteins of Drosophila melanogaster

FILE REPRESENCE: File Reference: 7326-094

CURRENT APPLICATION NUMBER: US/09/270,767

CURRENT PILING DATE: 1999-03-17

NUMBER OF SEQ ID NOS: 62517

SOFURARE: Patentin Ver. 2.0

SEQ ID NO 42702

LENGTH: 447
                                                                                                                                                          Gaps
